Profile

I am an MSc student in Quantum Information Science at the University of Copenhagen with over four years of professional experience in software quality assurance, automation, and technical problem solving. My background includes test automation, API validation, CI/CD workflows, scripting, and cross-functional collaboration. Through both academic and industry work, I have developed strong analytical thinking, programming, and data-oriented problem-solving skills. I am interested in opportunities across software engineering, quality engineering, data-focused roles, IT, and other technical positions where I can contribute through structured thinking, continuous learning, and practical execution.

Skills

- **Programming:** Python, Java, JavaScript, SQL
- **Testing & Automation:** Cypress, Selenium, REST Assured, Pytest, JMeter, Postman
- **Data & Analysis:** SQL, Excel, Data Validation, Reporting, Tableau
- **CI/CD & Tools:** Jenkins, Docker, GitHub Actions, AWS
- **Documentation & Collaboration:** Jira, Confluence, Report Portal
- **Core Strengths:** Problem Solving, Debugging, Analytical Thinking, Process Improvement
- **Language:** English Proficiency – IELTS 7.5 (C1 equivalent)

Work Experience

Dynamic Solution Innovators (DSi) *Feb 2021 – Aug 2025*
Software Quality Assurance Engineer, Dhaka, Bangladesh

- Worked on software quality assurance, test automation, and validation across multiple client projects.
- Developed and maintained automated test suites using Selenium, Cypress, REST Assured, and related tools.
- Performed API testing, regression testing, and system validation to improve product reliability.
- Integrated automated checks into CI/CD pipelines to support efficient release workflows.
- Collaborated with developers, DevOps engineers, and stakeholders to investigate issues and improve processes.
- Created and maintained documentation, test cases, and reports using Jira and Confluence.

Black Duck (Client of DSi) *Oct 2024 – Aug 2025*
QA Automation Engineer, Remote

- Built and maintained end-to-end and API automation for enterprise software products.
- Supported pipeline integration and quality workflows in collaboration with DevOps teams.
- Contributed to improving software stability through structured validation and testing practices.

Synopsys (Client of DSi) *Aug 2023 – Sept 2024*
QA Automation Engineer, Remote

- Expanded automation coverage for compliance-related software systems.
- Helped ensure reliability across different build, test, and deployment environments.
- Assisted in identifying defects, validating fixes, and maintaining quality standards.

Projects

UI Automation Framework (Cypress)

- Built a reusable UI automation framework for an e-commerce application using Cypress.
- Applied structured design principles to make the framework easier to extend and maintain.

Machine Learning Approach to Credit Card Fraudulent Detection

- Built a machine learning-based system for detecting fraudulent credit card transactions.
- Worked with supervised learning methods, feature engineering, and model evaluation techniques.
- Used approaches including AdaBoost, XGBoost, and Neural Networks.

Reinforcement Learning Applied to Finance

- Conducted undergraduate thesis research on reinforcement learning for financial decision-making.
- Applied Proximal Policy Optimization with financial indicators to explore trading strategies.
- Evaluated model behavior under different market conditions and parameter settings.

Education

University of Copenhagen *2025 – 2027*
MSc in Quantum Information Science

- Studying quantum computing, quantum algorithms, and quantum information theory.
- Developing strong foundations in advanced computation, mathematics, and scientific problem solving.

BRAC University *2016 – 2020*
BSc in Computer Science and Engineering

- Studied algorithms, software engineering, databases, artificial intelligence, and related core topics.
- Completed thesis work and applied projects involving machine learning and data-driven systems.

Technical Writing

Selector Strategies

- Wrote about practical approaches for creating reliable and maintainable UI selectors.
- Shared best practices for improving automation quality and long-term maintainability.

Getting Started with Cypress

- Published an introductory guide on installing, configuring, and using Cypress.
- Explained basic testing workflows and debugging concepts for beginners.
